Work experience

Backend Engineer

From September 2021 to May 2023 **Faume** Paris

Worked with : Symfony (5 & 6), Shopify, Vue, RabbitMQ

- > Created an auto-complete algorithm to fill up product infos from our customers database on shopify products list (named Automerch)
- > Added fonctionnalities on internal Backoffice (Easy Admin)
- > Created Dashboard of Metrics and KPI shown for the company and their customers (Brands)
- > Design and implementation of a cropping algorithm for photos of clothing worn by models to enable automated product listing enhancement (using Amazon Rekognition + Imagick).
- > Worked on Discount Code creation and refund scheme (Y2, Prestashop, Shopify)
- > Implementation of the Aigle loyalty program (A L'AIR LIBRE) on the second-hand side (link Y2 + Shopify link)
- > Design and production of the complete API for the customers' area (listing and tracking of trade-ins and purchases, tracing all logistical stages)
- > Design and documentation of several services using external third parties (DeepL, OpenAI, ShippyPro) used by other developers in the company
- > Creation of the api + data system for the reference-based trade-in system (indexing the brand catalog in the system, predictive search, calculation of the trade-in and resale price)
- > Technical onboarding of new brands
- > Brand catalog management (publish or de-publish, change of trade-in price and resale prices on the second-hand part shop using various criteria such as season or type)
- > Enriching Brand catalogs (cropping, combining photos by season and type for example)
- > Backend maintenance of brands sites (more than 20 brands) & made code for brand if necessary
- > Automation of certain tasks with a view to migrating to a SAAS model
- > Creation of product descriptions using AI (OpenAI)
- > Internationalisation of data
- > API documentation (OpenAPI)
- > Unit testing (PHPUnit)
- > Lead on several company subjects
- > Technical sharing
